

SecureIT Services

SecureIT uses the best combination of industry tools and customizations to stop and eliminate Internet threats without any user interaction.

Managed Virus Protection

Virus protection that is fully managed with no user interaction. Security specialist work around the clock to ensure PC protection.

Spyware Protection and Popup Blocker

SecureIT services detects and protects from a large variety of spyware types. Combined with the fully customizable popup blocker this saves both time and bandwidth.

Personal Firewall

The personal firewall provides protection from hackers and intrusions. Running in the background, the firewall protects PC's with no user interaction.

Patch Management

Staying up to date on critical Microsoft patches is important for PC's. SecureIT services ensures that patches are tested and applied to PC's safely and in a coordinated manner.

Parental Controls and Filtering

SecureIT Plus parental controls contain a robust set of options to block webpages, allow time spent on the PC, tracks pages visited, and much more.

Reporting & Secure Customer Care

A monthly report is sent to SecureIT Plus users. These reports show a real-time view of SecureIT online defense statistics.

System & Disk Maintenance

SecureIT Plus integrates disk cleanup and maintenance into the software to keep PC's running smoothly and detect common disk problems.

All of SecureIT Products are developed in-house and are supported by SecureIT's own staff. In addition, SecureIT offers 24/7 support from its Midwest based call center to customers on all of it's products because computer problems don't keep regular hours. Call 1-877-373-3320 for assistance.
